- **Merchandiser Decks**
- **Pulp Wood Slashing**
- **Portable Slashers**
- **Easy Maintenance**

In the sawmill, the pulp mill or in the woods, Simonds International has the

insert tooth saw for you. Our carbide tipped Slasher saws have been proven to be the toughest

in the business.

Precision close tolerance teeth and **full gauge**, thick saw plates will stand up to the toughest feed applications.

Quick change teeth yield maximum up time. Carbide tipped insert teeth can be re-tipped in the saw shop or **while your saw is on the arbor**.

Kodiak 500 and F2 470 Jumbo CT
Grizzly 440 Vee Back CT
Style M Hammerset
Style 44 CT and Hammerset

Gauge	Decimal	MM
4	.238	6.045
3	.259	6.579
2	.284	7.214
1	.300	7.620

Cutting Across the Grain

Simonds International inserted tooth slasher and cutoff saws set the industry standard for quality. They are manufactured to suit a wide assortment of applications and environments. Our tough saw plates are laser cut and machined using state-of-the-art CNC equipment to ensure precise tooth-to-pocket fits. Carefully controlled manufacturing processes enable us to produce inserted tooth saws of superior quality and durability.

Our heavy duty TimberFox saws are available with Kodiak, F2 Flareside, Grizzly, Style M, or 44 Style replaceable insert teeth. These saws can handle cutting requirements from moderate to the harshest conditions.

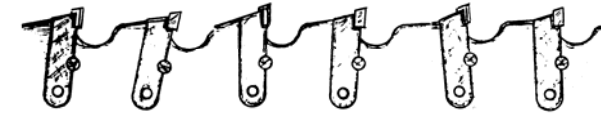

Investment cast carbide tipped insert teeth are the proven technology to protect your high quality saw plate from damage. The proven **replaceable tooth technology** means maximum up time and quick tooth changes. Damaged or dull teeth can be changed on the arbor. No need to remove the saw from service to bring it back to sharp cutting condition.

Inserted Carbide Tipped teeth are available with double / *hollow point* or LH / RH carbide tips. Simonds International Slasher Saws are available in diameters from 36" to 96". The most common 60" and 72" saws are custom finished for quick delivery from semi finished stock.

Investment cast Jumbo type teeth available with Kodiak or F2 hollow point carbide tips. Simonds International also offers a broad line of other style teeth with carbide tips or in solid steel.

Are you ready for tough Simonds International Insert Saws and Teeth?

- | | |
|------------|--|
| 10 deg Pos | Recommended when saw arbor is below the log. |
| 0 deg | Recommended when saw arbor is above the log. Common on Swing or Chop Saws. |
| 5 deg Neg | Recommended when saw arbor is above the log. Common on stationary decks. |
